

**THINK YOUR PROCESS IS PERFECT?**

**THINK AGAIN.**

It may be good, but it could be better. Cheaper. Faster. We should know, for the past 10 years we've been helping manufacturers by developing better, more cost-effective ways to make glass containers.

When glass manufacturers wanted a better coating solution, we developed a new series of coatings effective in both glass-to-glass and metal-to-metal contact. These coatings have been applied to neck rings, shear blades, baffles, bottom plates. The result: lubrication life is 28,800 times longer, blank life increases threefold, and rejection rates are 1/8th of what they had been.

We're not interested in doing things the way they've always been done. If you've got issues that aren't being solved by the processes you're using, you need SG Alternatives. We'll work closely with you to identify the cause of the problem and generate innovative solutions to it.

**SGA PORTFOLIO OF PRODUCTS**

- Innovative, Patented 600 Series Coatings
- Electro-pneumatic Control Systems
- Electrical Servo Stackers & Ware Transfers
- State-of-the-art Inspection Equipment
- Value-added Information Systems
